

**IN THE ABSTRACT**

Please replace the Abstract with the following:

-- The invention relates to a method of ~~causing interaction of CD94/NKG2+~~  
~~cells~~ testing a compound for biological activity, which method comprises providing  
cells expressing one of the CD94/NKG2 family of receptors, contacting the cells with  
recombinant HLA-E under binding conditions in the presence of the test compound,  
and determining whether the presence of the compound affects the binding of HLA-  
E to the cells. The HLA-E property of binding to CD94/NKG2 receptors on NK cells  
and a subset of CD8+ T cells is useful for targeting CD94/NKG2+ cells for a variety  
of purposes such as identification[.], isolation, killing or inactivation. --
